Uniform Mitigation Verification Inspection Form

Maintain a copy of this form and any documentation provided with the insurance policy

Inspection	n Date: 12/4/2023								
Owner Information									
	ame: Pine Rush Villas Condo A	Contact Person: Gary French							
Address:	9950 5th St N - Bldg 14				Home Phone:				
City: St. I		Zip: 33702	Zip: 33702		Work Phone:				
County:					Cell Phone: (727) 576-4611				
	Company:				Policy #:				
Year of H	ome: <sub>1974</sub>	# of Stories: Two	# of Stories: Two		Email: gfrenchprv@yahoo.com				
NOTE: Any documentation used in validating the compliance or existence of each construction or mitigation attribute must accompany this form. At least one photograph must accompany this form to validate each attribute marked in questions 3 though 7. The insurer may ask additional questions regarding the mitigated feature(s) verified on this form.									
the HV	Building Code: Was the structure built in compliance with the Florida Building Code (FBC 2001 or later) OR for homes located in the HVHZ (Miami-Dade or Broward counties), South Florida Building Code (SFBC-94)?  A. Built in compliance with the FBC: Year Built For homes built in 2002/2003 provide a permit application with								
	date after 3/1/2002: Building			2002/2003 provide a per	mit application with				
pro	B. For the HVHZ Only: Built in compliance with the SFBC-94: Year Built For homes built in 1994, 1995, and 1996 provide a permit application with a date after 9/1/1994: Building Permit Application Date (MM/DD/YYYY)								
• •	Unknown or does not meet t	-							
OR Ye	Covering: Select all roof covering: Select all roof cover of Original Installation/Rengidentified.								
	.1 Roof Covering Type:	Permit Application Date	FBC or MDC Product Approval #	Year of Original Installation or Replacement	No Information Provided for Compliance

	5. Membrane								
	6. Other Modified Bitumen	06/09/2023	Permit # 23-6000736	2023					
A. All roof coverings listed above meet the FBC with a FBC or Miami-Dade Product Approval listing current at time of installation OR have a roofing permit application date on or after 3/1/02 OR the roof is original and built in 2004 or later									
	All roof coverings have a M ofing permit application after	1.1	e e	`	2 /				
	One or more roof coverings	-		3".					
D.	. No roof coverings meet the	requirements of Answer "A	A" or "B".						
3. <b>Roof I</b>	Deck Attachment: What is the	ne <u>weakest</u> form of roof de	ck attachment?						
by sh me	A. Plywood/Oriented strand board (OSB) roof sheathing attached to the roof truss/rafter (spaced a maximum of 24" inches o.c. by staples or 6d nails spaced at 6" along the edge and 12" in the fieldOR- Batten decking supporting wood shakes or wood shinglesOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that has an equivalent mean uplift less than that required for Options B or C below.								
24 otl	B. Plywood/OSB roof sheathing with a minimum thickness of 7/16"inch attached to the roof truss/rafter (spaced a maximum 24"inches o.c.) by 8d common nails spaced a maximum of 12" inches in the fieldOR- Any system of screws, nails, adhesive other deck fastening system or truss/rafter spacing that is shown to have an equivalent or greater resistance 8d nails spaced maximum of 12 inches in the field or has a mean uplift resistance of at least 103 psf.								
24 de Aı	Plywood/OSB roof sheathin Prinches o.c.) by 8d common exching with a minimum of 2 many system of screws, nails, as as Initials Property Ac	nails spaced a maximum on ails per board (or 1 nail p	of 6" inches in the field of 6 board if each board is	-OR- Dimensional lumbs equal to or less than 6 in	per/Tongue & Groove nches in width)OR-				
mspector	And posters and an arrangement of the state								

\*This verification form is valid for up to five (5) years provided no material changes have been made to the structure. OIR-B1-1802 (Rev. 01/12) Adopted by Rule 69O-170.0155 Page 1 of 4

D. Reinforced Concrete Roof Deck.   E. Other:   F. Unknown or unidentified.   G. No attic access.   4. Roof to Wall Attachment: What is the WEAKEST roof to wall connection? (Do not include attachment of hip/valley jacks within 5 feet of the inside or outside corner of the roof in determination of WEAKEST type)      A. Toe Nails			or greater resistance than 8d common nails spaced a maximum of 6 inches in the field or has a mean uplift resistance of at least 182 psf.							
F. Unknown or unidentified.		П		1						
F. Unknown or unidentified.   G. No attice access.		一								
G. No attic access.		靣								
5 Feet of the inside or outside corner of the roof in determination of WEAKEST type)  A. Toe Nails    Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached to the top plate of the wall, or   Metal connectors that do not meet the minimal conditions or requirements of B, C, or D.										
Truss/rafter anchored to top plate of wall, or   Metal connectors that do not meet the minimal conditions or requirements of B, C, or D   Minimal conditions to qualify for categories B, C, or D. All visible metal connectors are:	4.	5 fe	feet of the inside or outside corner of the roof in determination of WEAKEST type)							
the top plate of the wall, or    Metal connectors that do not meet the minimal conditions or requirements of B, C, or D		$\boxtimes$	A. 7	Toe Nails	S					
Minimal conditions to qualify for categories B, C, or D. All visible metal connectors are:					the top plate of the wall, or	d attached to				
Secured to truss/rafter with a minimum of three (3) nails, and   Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion.    B. Clips   Metal connectors that do not wrap over the top of the truss/rafter, and free of visible severe corrosion.    C. Single Wraps   Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the nail position requirements of C or D, but is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.    D. Double Wraps   Metal Connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or   Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or   Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to both sides, and is secured to the top plate with a minimum of the nails on each side.    E. Structural   Anchor bolts structurally connected or reinforced concrete roof.				$\boxtimes$	Metal connectors that do not meet the minimal conditions or requirements of B, C, or D					
Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion.  B. Clips  Metal connectors that do not wrap over the top of the truss/rafter, or  Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the nail position requirements of C or D, but is secured with a minimum of 3 nails.  C. Single Wraps  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.  D. Double Wraps  Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or  Metal Connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 1 nail on the opposing side, or  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the wall on both sides, and is secured to the top plate with a minimum of 1 nail on the opposing side, or  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the wall on both sides, and is secured to the top plate with a minimum of 2 nails on each side.  F. Structural  Anchor bolts structurally connected or reinforced concrete roof.  H. No attic access  Metal connected space in the determination of roof perimeter or roof area for roof geometry classification).  A Hip Roof  Hip roof with no other roof shapes greater than 10% of the total roof system perimeter.  Total length of non-hip features:  Feet; Total roof system perimeter.
